Inhalt:

A1: General, as well as substance-specific methods for the qualitative and quantitative analysis (identity, purity, concentration) of drug substances according to the European Pharmacopoeia; assessment of physico-chemical properties and reactivities of drug substances, based on their structures; evaluation of the informational value (selectivity, specificity) of individual analysis methods/reactions; special focus: color reactions.

A2: Theoretical knowledge and understanding for the mechanism of action, chemical synthesis, biotransformation, physicochemical properties and SAR studies of the most important drugs and bioactive compound families including: Agents affecting the nervous system, agents with cardiovascular effects, antiallergics, analgesics, antidiabetics, antibiotics, chemotherapeutics and vitamins.

A3: lab course on the pharmaceutical analysis of drugs; determination of identity, purity and quantification

Lernziele und Kompetenzen:

The students

- gain insight into the design, synthesis & development of new drug products in the medicinal/pharmaceutical area
 - acquire expertise for the theoretical evaluation and practical application of the most important techniques for the instrumental and bioanalysis of drugs
 - are able to reflect crucial theories of the specialty in order to challenge problems in analytical practice.
